

INFRADIAN RHYTHMS IN MEDICAL AMBULANCE TEAM ATTENDANCE

S.A. Dudin

The Buryat State University, Ulan-Ude, Russia

Abstract. The results of a spectral and correlation analysis of changes in the daily calls of ambulance teams over three years are introduced. The results show a fluctuation in periods of 7, 41, 50–51, 68–82, 136, 227, 310–365 days, and with a small daily amplitude in 11, 13–14, 17–18, 23, 29, 31, 36, 58 days. In their half, these coincide with the indications of Tibetan doctors. The periods discovered match closely changes in the gradient of the Earth's electric field potential.

Keywords: biorhythm, Earth's electric field, first medical aid, Tibetan medicine.
